

Bridgehill PRO X Fire Blanket Usage Confirmation

DATE: 9.11.2024 - COUNTRY: Sweden

Swedish fire stations use Bridgehill PRO X fire blankets on a daily basis as part of their strategy to combat car fires and fires involving electric vehicles. Since the use of water is ineffective on a Li-ion car battery pack in thermal runaway, it is much more efficient to use the PRO X Car Fire Blanket to isolate the fire, smoke, and toxic fumes. Additionally, using a fire blanket is environmentally friendly, as it significantly reduces the release of toxins into the air and ground soil. The PRO X blankets are reusable up to 30 times, making them highly cost-effective. These fire blankets are specifically designed to withstand extremely high temperatures, both in the short and long term, providing reliable protection during critical fire incidents.

Fire Station: City - Helsingborg - Räddningstjänsten Skåne Nordväst

Name: Mikel Karlsson

Title: Styrkeledare (Crew Commander)
